

XDcuff® Clips

Stay safe with XDcuff® Clips

XDcuff® Clips help limit your exposure to stress and injury when medical patients become uncooperative. Plus, you can treat and transport these patient types faster than ever before. Here is an image showing how these innovative restraints are stored conveniently in the head-rest storage pouch. This saves time and prevents having to search for restraints.

Clip in quickly

One of the improvements we have made is to integrate restraint anchor clips with the stretcher so you don't have to. This also improves application times in emergencies and eliminates awkward bending when releasing or tying to the stretcher.

Strategically positioned for security

Another benefit is knowing that your anchoring position is secure and optimal for patient positioning. This eliminates any chance of anchor becoming loose. Confusion is also reduced between all providers because everyone will know where to anchor. Plus, it eliminates the chance of making the critical error of anchoring patient and restraint to legs of the stretcher.

Antimicrobial and durable

XDCuff Clips uses an impermeable and rugged webbing called BioThane® and utilize the strongest adjustable buckles (YKK®) on the market. These buckles provide an impressive breaking strength of 450Lb each and allows for quick adjustability and release.

Interchangeable

XDCuff® Clips also work with stair chairs, scoop stretchers, backboards and some hospital beds.

Simple design, quick to install.

1. Choose four attachment points that your lead medical authority prefers.
2. Feed female buckle through formed loop and secure the small piece of hook-and-loop fastener x4, this will prevent the anchors from being lost when not in use.
3. Store cuffs with male buckle in widely used location. Best kept in the headrest storage pouch for quick access, especially when crew are separated from ambulance.

Save Money

Our reusable restraint cuffs are \$39.95 per pair and can be used up to ten times before we recommend disposing. This is only \$3.99 for each deployment. Introductory offer of \$35.00 start-up cost for a set of four XDCuff® Clips per stretcher (one-time purchase). Total cost of initial set up for cot \$114.90 (pack of four) not including tax and shipping.

Dave Dufek
Founder

Developed by EMS for EMS

This company started because my partner was injured during the physical restraint process. Throughout my career in EMS I had witnessed similar problems with traditional restraint methods when using cling, duct tape, sheets and the common tie-to-apply limb holders. We understand the difficulties of restraining uncooperative patients in healthcare and have developed a superior limb restraint and method to combat this.
